SCALE FOR PROJECT PYTHON MODULE (/PROJECTS/PYTHON-MODULE-04)

You should evaluate 1 student in this team

★

Git repository

```
git@vogsphere-v2.42madrid.com:vogsphere/intra-uuid-5dca9c39-2f
```

Introduction

- Remain polite, courteous, respectful and constructive
throughout the evaluation process. The well-being of the community
depends on it.

- Together with the person (or group) being evaluated, identify any issues in the work.
Take the time to discuss and debate the problems you have identified.

- You must consider that there might be differences in how your
peers have understood the project's instructions and the
scope of its functionality. Always keep an open mind and grade
their work as honestly as possible. The pedagogy is valid
only if peer evaluation is conducted seriously.

Guidelines

- Only grade the work that is in the student's or group's
Git repository.

- Double-check that the Git repository belongs to the student
or the group. Ensure that the work is for the relevant project
and also check that "git clone" is run in an empty folder.

- Check carefully that no malicious aliases were used to fool you
and make you evaluate something other than the content of the
official repository.

- To avoid any surprises, carefully check that both the evaluating
and the evaluated students have reviewed any scripts that may be used
to facilitate grading.

- If the evaluating student has not completed that particular
project yet, it is mandatory for this student to read the
entire subject document prior to starting the defence.

- Use the flags available on this scale to signal an empty repository,
a non-functioning program, a norm error, cheating, etc. In these cases,
the grading is over and the final grade is 0 (or -42 in case of
cheating). However, with the exception of cheating, you are
encouraged to continue to discuss your work (even if you have not
finished it) in order to identify any issues that may have caused
this failure and avoid repeating the same mistake in the future.

- Remember that for the duration of the defence, no unexpected,
premature, uncontrolled termination of the program is allowed;
otherwise, the final grade is 0. Use the appropriate flag.
You should never have to edit any file except the configuration file, if it exists.
If you want to edit a file, take the time to discuss the reasons with the
evaluated student and make sure both of you agree with this change.

Preliminaries

Basics

- Only grade the work that is in the learner's Git repository
- Ensure the Git repository belongs to the learner
- Check that no malicious aliases are used
- Verify the project structure matches the subject requirements
- Check that only the requested files are present in the Git repository. If not, the review stops h

Are all preliminary checks satisfied?

Yes No

Exercises

Exercise 0 - Ancient Text Recovery

Test the Ancient Text Recovery system:

- If needed, ask the learner to help you with the tests
- Create a test file with some content
- Run the program and verify that it:
  - Opens the file using open()
  - Reads the entire content using read()
  - Displays the content correctly with print()
  - Closes the file properly using close()
- Test with different file contents
- Verify that the program correctly handles error when calling on open(), by testing with a none an inaccessible file.

Yes No

Exercise 1 - Archive Creation

Test the Archive Creation system:

- If needed, ask the learner to help you with the tests
- Run the program and verify it:
  - Opens, reads, displays, and closes the file passed as a parameter (task from the previ
  - Updates the content and displays it again (with the '#' character at the end of each line
  - Asks for a new file name and opens it for writing (creates it if it does not exist)
  - Writes content to the file using write()
  - Closes the file properly
- Check that the created file contains the expected content
- Test that the program overwrites existing files
- Verify that the learner understands that the 'w' mode can overwrite existing data

Yes No

Exercise 2 - Stream Management

Test the Stream Management system:

- If needed, ask the learner to help you with the tests
- Run the program and verify it:
  - Meets the same requirements as the previous exercises (reads a file, update the conte name, and write to the new file)
  - Prints the error messages to stderr (see the code) with a clear prefix
  - Does not use the input() function, but instead reads from stdin (using read() or readline

Yes No

Exercise 3 - Vault Security

Test the Vault Security system:

- If needed, ask the learner to help you with the tests

- Verify that the program contains a 'secure_archive()' function
- Check that all file-related operations are handled by this function
- Check that the function uses a 'with' statement
- Verify that the program uses the function to test multiple cases (valid and invalid cases) and
  results
- Recoding task: update the code so that you can verify that files are automatically closed whe

Yes No

Code Quality Standards

Code Quality

Assess the overall code quality and standards:

- Is the code written in Python 3.10 or higher?
- Does the code comply with the flake8 linter standards (no errors)?
- Type hints are required for all functions and methods; check this using mypy.
- Docstrings are NOT required for this module.
- Is the code well-structured and readable?
- Are variable names meaningful and descriptive?
- Is error handling implemented appropriately?

Yes No

Ratings

Don’t forget to check the flag corresponding to the defense

✔ Ok ★ Outstanding project

Empty work Incomplete work Invalid compilation Norme Cheat

Concerning situation Leaks Forbidden function Can’t support /

Conclusion

Leave a comment on this evaluation (2048 chars max)

Finish evaluation
